

WEED ZINGER®

Grasp the Weed Zinger by the foam padded handle.

Use your dominant hand to locate the center of the weed by tapping down

For BEST results always weed 1/2 a day after a good rain.

Make sure that the tines can easily penetrate the soil.

Stubborn weeds may require a full turn of the handle.

Dandelion leaves deflect inwardly on all sides when the center is located.

Step firmly on the base of the pedal. This causes the tines to close in and around the root.

The center shaft will move upward and engage a series of notches. Engage 2-3 notches for best results.

Twist the handle of the Zinger 90-180 degrees to sever the taproot, larger weeds may require a full turn.

Lift the handle and swing the arm forward in an arc like motion toward the trash can.

Squeeze the trigger to release the weed. With a little practice you can propel the weed 6-15'.

This tool can easily be operated with one hand for adults and two hands for children older than 6 years old.
